

Experiment no-01

1. Write program demonstrates how to use regular expressions in Python to match and search for patterns in text.

PROGRAM:

```
import re

text = input("Enter a sentence: ")
pattern = input("Enter pattern: ")

match = re.search(pattern, text)

if match:
    print("Pattern Found")
    print("Matched:", match.group())
else:
    print("Pattern Not Found")
```

OUTPUT:

```
Enter a sentence: there is a bag
Enter pattern: language
Pattern Not Found
```
