

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 1 – APPLICATION BASED QUESTIONS

Course Code:	DSA0305	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 1 – Application Based Questions
Weightage:	40% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	Sravanthi.D	Reg. No.:	192425315
Section / Batch:	3 rd year	Date:	15.07.2026

Code of Conduct

I __Sravanthi.D(192425315)____ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____ D.Sravanthi _____

Instructions

- Develop a modular and efficient Python program that satisfies all the functional requirements specified in the problem statement.
- Demonstrate the correctness of the implementation using suitable test cases and justify the output obtained.
- Follow good programming practices, including meaningful variable names, proper code indentation, comments, and error handling wherever applicable.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Information Extraction	Regex-Based Information Extraction	1
Pattern Matching	Regex Pattern Matching	2
Regular Expression Patterns	Regex-Based Input Validation	3

Section 1: Regular Expressions – Resume Information Extraction

1. A multinational recruitment company receives thousands of resumes every day in text format. The HR department requires an automated system to extract candidate information for shortlisting.

Design and implement a Python-based resume information extraction system using Regular Expressions that performs the following tasks:

Extract the candidate's name.

Identify email addresses.

Extract mobile numbers.

Detect technical skills (Python, Java, SQL, Machine Learning, NLP).

Extract years of experience.

Generate a structured summary of the candidate's profile.

Display candidates who satisfy the minimum eligibility criteria (minimum 2 years of experience and Python skill).

Program:

```
import re

resume = """
Name: Sravanthi D
Email: sravanthi@gmail.com
Mobile: 9876543210
Skills: Python, SQL, Machine Learning, NLP
Experience: 3 years
"""

# Extract Name
def extract_name(text):
    match = re.search(r"Name:\s*(.*)", text)
    return match.group(1) if match else "Not Found"

# Extract Email
def extract_email(text):
    return re.findall(r"[A-Za-z0-9._%+-]+@[A-Za-z0-9.-]+\.[A-Za-z]{2,}", text)

# Extract Mobile
def extract_mobile(text):
    return re.findall(r"\b\d{10}\b", text)

# Extract Skills
def extract_skills(text):
    skills = ["Python", "Java", "SQL", "Machine Learning", "NLP"]
    found = []
    for skill in skills:
        if re.search(skill, text, re.IGNORECASE):
            found.append(skill)
    return found
```

```

# Extract Experience
def extract_experience(text):
    match = re.search(r"(\d+)\s+years?", text)
    return int(match.group(1)) if match else 0

# Generate Summary
name = extract_name(resume)
email = extract_email(resume)
mobile = extract_mobile(resume)
skills = extract_skills(resume)
experience = extract_experience(resume)

print("----- Candidate Profile -----")
print("Name:", name)
print("Email:", email)
print("Mobile:", mobile)
print("Skills:", skills)
print("Experience:", experience, "Years")

# Eligibility
if experience >= 2 and "Python" in skills:
    print("\nEligible for Shortlisting")
else:
    print("\nNot Eligible")

```

Output

```

*** ----- Candidate Profile -----
Name: Sravanthi D
Email: ['sravanthi@gmail.com']
Mobile: ['9876543210']
Skills: ['Python', 'SQL', 'Machine Learning', 'NLP']
Experience: 3 Years

Eligible for Shortlisting

```

Section 2: Regular Expressions – Product Search System

2. An e-commerce company plans to enhance its product search engine to improve customer experience through flexible keyword matching.

Design and implement a Python-based product search system using Regular Expressions that performs the following tasks:

Search products using an exact keyword.
 Perform prefix-based searches.
 Perform suffix-based searches.
 Search using partial keywords.
 Perform case-insensitive searches.
 Display all matching product names.
 Generate a report showing the total number of matching products for each search.

Program:

```

import re

products = [
    "Laptop",
    "Laptop Bag",
    "Mouse",
    "Keyboard",
    "Monitor",
    "Phone",
    "Phone Case",
    "Smart Watch"
]

keyword = input("Enter search keyword: ")

# Exact Search
exact = [p for p in products if re.fullmatch(keyword, p, re.IGNORECASE)]

# Prefix Search
prefix = [p for p in products if re.match(keyword, p, re.IGNORECASE)]

# Suffix Search
suffix = [p for p in products if re.search(keyword + "$", p, re.IGNORECASE)]

# Partial Search
partial = [p for p in products if re.search(keyword, p, re.IGNORECASE)]

print("\nExact Match:", exact)
print("Prefix Match:", prefix)
print("Suffix Match:", suffix)
print("Partial Match:", partial)

print("\nSearch Report")
print("Exact:", len(exact))
print("Prefix:", len(prefix))
print("Suffix:", len(suffix))
print("Partial:", len(partial))

```

Output:

```

... Enter search keyword: phone

Exact Match: ['Phone']
Prefix Match: ['Phone', 'Phone Case']
Suffix Match: ['Phone']
Partial Match: ['Phone', 'Phone Case']

Search Report
Exact: 1
Prefix: 2
Suffix: 1
Partial: 2

```

Section 3: Regular Expressions – University Registration System

A university is developing an automated online registration portal to verify student information before course enrollment.

Design and implement a Python-based validation system using Regular Expressions that performs the following tasks:

- Validate the student register number.
- Validate the institutional email address.

Validate the course code.

Validate the semester information.

Validate the student's mobile number.

Display appropriate validation messages for each field.

Generate a final registration status report indicating whether the registration is successful.

Program:

```
import re

reg_no = input("Enter Register Number: ")
email = input("Enter Email: ")
course = input("Enter Course Code: ")
semester = input("Enter Semester: ")
mobile = input("Enter Mobile Number: ")

status = True

# Register Number
if re.fullmatch(r"\d{9}", reg_no):
    print("Register Number Valid")
else:
    print("Invalid Register Number")
    status = False

# Email
if re.fullmatch(r"[A-Za-z0-9._%+-]+@saveetha\.com", email):
    print("Email Valid")
else:
    print("Invalid Email")
    status = False

# Course Code
if re.fullmatch(r"[A-Z]{3}\d{2}", course):
    print("Course Code Valid")
else:
    print("Invalid Course Code")
    status = False

# Semester
if re.fullmatch(r"[1-8]", semester):
    print("Semester Valid")
else:
    print("Invalid Semester")
    status = False

# Mobile Number
if re.fullmatch(r"[6-9]\d{9}", mobile):
    print("Mobile Number Valid")
else:
    print("Invalid Mobile Number")
    status = False

print("\n----- Registration Report -----")
if status:
    print("Registration Successful")
else:
    print("Registration Failed")
```

Output:

```
*** Enter Register Number: 192425315
Enter Email: 192425315.simats@saveetha.com
Enter Course Code: DSA0305
Enter Semester: HS2
Enter Mobile Number: 9491156924
Register Number Valid
Email Valid
Invalid Course Code
Invalid Semester
Mobile Number Valid

----- Registration Report -----
Registration Failed
```

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Q. No. / Criteria	Understanding of Problem Context	Application of Concepts	Problem-Solving Approach	Accuracy of Solution	Clarity	Sub. Total	Total %
