

Experiment no-22

22. Create a python program that performs reference resolution within a text.

PROGRAM:

```
[1]
✓ 20s
text = input("Enter the text: ")

sentences = text.split(".")

if len(sentences) >= 2:
    first = sentences[0].split()
    second = sentences[1].split()

    noun = first[0]          # Assume first word is the noun
    pronoun = second[0]     # Assume first word is the pronoun

    print("Reference Resolution")
    print("Pronoun :", pronoun)
    print("Refers to :", noun)
else:
    print("Enter at least two sentences.")
```

OUTPUT:

```
... Enter the text: Ravi is a good student. He studies every day.
Reference Resolution
Pronoun : He
Refers to : Ravi
```
