

Experiment no-23

23. Develop a python program that evaluates the coherence of a given text

PROGRAM:

```
text = input("Enter the text: ")

sentences = text.lower().split(".")

sentences = [s.strip() for s in sentences if s.strip()]

coherent = True

for i in range(len(sentences) - 1):
    words1 = set(sentences[i].split())
    words2 = set(sentences[i + 1].split())

    if words1.intersection(words2):
        print(f"Sentence {i+1} and Sentence {i+2}: Coherent")
    else:
        print(f"Sentence {i+1} and Sentence {i+2}: Not Coherent")
        coherent = False

if coherent:
    print("\nOverall Result: The text is coherent.")
else:
    print("\nOverall Result: The text is not coherent.")
```

OUTPUT:

```
✓ ... Enter the text: Ravi likes cricket. Cricket is his favorite game.
    Sentence 1 and Sentence 2: Coherent

    Overall Result: The text is coherent.
```
